Re: Project Update - Newtonsville Collection System and Wastewater Treatment Plant; Project No. 6402-60116 & 6402-60117; Village of Newtonsville, Ohio

Dear Property Owner/Resident

This letter is intended to provide an update to the Village of Newtonsville and surrounding adjacent area's sanitary sewer collection system and wastewater treatment plant project.

The preliminary sewer alignment and treatment plant design along with the engineering report were completed and submitted to the Ohio EPA in January 2015. A NPDES permit was issued in May 2015. The permit allows for a treatment plant discharge into the unnamed tributary of Stonelick Creek located at the rear of 794 Wright Street.

At this time, the Clermont County Water Resources Department (CCWRD) has started the detailed design of the wastewater treatment plant and collection system. In the coming months, CCWRD consultants, CH2M Hill Engineers and RA Consultants will be in the area performing fieldwork in your neighborhood. That fieldwork will consist of topographical and utility surveys, identifying the locations of existing septic systems and taking necessary measurement of the septic tanks. This work will require personnel to enter onto your property, home or business.

Please be advised that Section 163.03 of the Ohio Revised Code allows our staff or designee to "...enter upon any lands, water, and premises for the purpose of making such surveys, soundings, drillings, appraisals, and examinations as are necessary or proper...". Please be advised that our staff is instructed to exercise care and caution in order to minimize the impact of their presence. Section 163.03 of the Ohio Revised Code also states "The agency shall make restitution or reimbursement for any actual damage resulting to such lands, waters, and premises and to improvements or personal property located in, on, along, over, or under such lands, waters and premises, as a result of such activities".

Following the completion of the detailed design a revised cost estimate will be prepared, funding reviewed, and a Public Informational Meeting (PIM) held. At the time of the PIM, the detailed design drawings will be presented and discussed.

The current schedule includes the following milestones:

- Detailed design complete spring 2016
- Public Informational Meeting late spring 2016
- Public Hearing summer 2016
- Easement acquisition and permitting complete January 2017
- Start construction May 2017
- Construction complete October 2018

Additional information can be reviewed on the county website at:
